ET | Representation effects across training sizes
Steel yield strength
MAE (MPa)
2D exfoliation energy
MAE (meV/atom)
Experimental band gap
MAE (eV)
Metal classification
ROC-AUC
Glass formation
ROC-AUC
Official training fold used (%)
Representation
A
B
C
ET: 100 trees, fixed seed 42
A: element fractions + composition statistics
B: Magpie attribute statistics
C: concatenation of A and B
Same subsets for every representation.
3 subsets at 20% and 50%; full point once.
Average subsets within each official fold first.
Error bars: fold SD, not confidence intervals.
No structural features in this study.
